## Cooperative Living RAPPAHANNOCK ELECTRIC

Smart homeowners around the world have scrapped their old furnaces and air conditioners and replaced them with a WaterFurnace geothermal comfort system. That's because geothermal comfort systems use the **free, renewable energy** found in your own backyard to **save up to 70% on heating, cooling and hot water.** You won't need that old inefficient furnace or that unsightly outdoor air conditioner because a WaterFurnace system provides **complete comfort for your home with a single unit.** And because the system doesn't burn fossil fuels, **there are no fumes or carbon monoxide concerns.** Make the smart switch to geothermal. Contact your local WaterFurnace dealer today to learn more.

Make the switch today! Scan to learn more.

VIEWPOINT

## Moving Forward **Together**

arch is Women's History Month, and the 2025 theme is "Moving Forward Together: Women Educating and Inspiring Generations." Our

Cooperative Focus feature aligns perfectly with this theme, featuring Sonja Cox, the president and CEO of Southern Maryland Electric Cooperative. Her inspiring life journey is fascinating, having led her to the top position at one of the largest electric cooperatives in the country. We are excited to have her on our board and in a leadership role at the Virginia Maryland & Delaware Association of Electric Cooperatives. She is a valuable member of our team.

We also honor another remarkable lady, Nancy Hoover, who recently passed. She was the first woman to serve as chair

of the VMDAEC board of directors from 2000 to 2002. She was a recipient of the distinguished Leadership Award, the Association's most prestigious honor.

The March issue also includes an article about the 80th anniversary of WWII's Battle of the Bulge, a Mecklenburg farm using drones for crop planting, and a wildlife sanctuary that has recently been dedicated in Southern Maryland. Additionally, you'll discover a new columnist who is a master gardener, ready to help you choose the best plants to grow this month in both Virginia and Maryland.

We are honored to work with our cooperative members to deliver this publication to over 1 million readers in our tri-state area. Cooperatives do everything possible to best serve their members so that we can all grow together. •

Brian S. Mosin

## Getting Wild in Southern Maryland

New national wildlife refuge dedicated in Charles County

by Gregg MacDonald, Staff Writer

IF YOU'RE A NORTHERN LONG-EARED BAT OR A DWARF WEDGEMUSSEL RESIDING IN SOUTHERN MARYLAND, YOUR LIFE MAY HAVE JUST IMPROVED. On Dec. 13, the U.S. Fish and Wildlife Service took the first step in establishing the Southern Maryland Woodlands National Wildlife

Refuge as the 573rd and newest unit of the National Wildlife Refuge System. The 31-acre parcel near Nanjemoy in Charles County, Md., is the first of several land donations planned to permanently protect and conserve more than 300 acres of interior forest and riparian wetlands habitat, supporting northern long-eared bats, forest-interior songbirds, box turtles, dwarf wedgemussels and several species of salamanders of conservation concern. More land donations are expected over the next few months of 2025.

The Service says it will continue working with partners and willing sellers to secure voluntary conservation of up to 40,000 acres of wildlife habitat within four watershed-based focus areas in Anne Arundel, Prince George's, Calvert, Charles and St. Mary's counties in Maryland.

"Today, we mark an incredible milestone in locally led conservation efforts as we welcome the Southern Maryland Woodlands National Wildlife Refuge into our National Wildlife Refuge System," said former U.S. Fish and Wildlife Service Secretary Deb Haaland during the refuge's dedication.

"Today's announcement is a great example of the collaborative conservation that happens when longstanding partners work together in support of community-led priorities to conserve and restore important landscapes," added former U.S. Fish and Wildlife Service Director Martha Williams. .

The National Wildlife Refuge System is a network of 573 national wildlife refuges and 38 wetland management districts. There is a national wildlife refuge within an hour's drive of most major metropolitan areas. More than 69 million Americans visit these refuges every year. Refuges provide vital habitat for thousands of species and access to world-class recreation, from fishing, hunting and boating to nature watching, photography and environmental education. Recreational activities on national wildlife refuges supports regional economies to the tune of \$3.2 billion per year and supports more than 41,000 jobs.

For more information on national wildlife refuges, visit fws.gov.

## Consider all options while navigating potential career paths

by Jim Robertson, Staff Writer

n open mind and flexibility while navigating her career path allowed Rachel Harris to find a powerful career in geographic information systems with BARC Electric Cooperative in Millboro, Va. She is charged with maintaining and updating system maps for the co-op's electric grid and fiber network. As the GIS project manager, Harris is often called upon by her colleagues to provide troubleshooting solutions.

Growing up in Augusta County, Va., served by neighboring Shenandoah Valley Electric Cooperative, Harris had childhood dreams of becoming a veterinarian. She completed a degree in wildlife science and biology at Virginia Tech with hopes of becoming a wildlife biologist. Reality taught her that sometimes our passions do not always translate into promising careers.

"I studied the changes of a landscape over time through mapping different variables while in graduate school," says Harris, who earned a master's in forestry at West Virginia University. "My thesis focused on hardwood markets and insect detriment studied through satellite imagery in remote areas."

"Most things in life are not linear. We need to be able to jump on and off the path as needed to reach our destination." — Rachel Harris

Prior to joining BARC, Harris explored careers at a veterinarian office, financial institutions, orchards, vineyards, in forestry and in marketing at an agriculture co-op. She finally feels at home with her BARC co-op family.

Harris believes in and encourages others to allow room for deviation to achieve goals in life, especially regarding career goals. "Most things in life are not linear," she explains. "We need to be able to jump on and off the path as needed to reach our destination. It's OK to change your mind. It is better to have a change of heart and be content than stick to a plan and risk your happiness."

The first GIS project manager ever to hold the role at BARC, Harris maintains the BARC system maps and assists with field surveying and staking. Properly maintaining the mapping system also impacts outage and restoration events. Reducing time to locate system attributes through an electronic map can help to reduce downtime on services to members.

She thrives on helping her co-op peers with issues by making their jobs a little easier or more understandable. "Being able to help solve problems and keep the system functioning properly is quite rewarding," she says. "Even if it does come with additional challenges. I also believe in finding a way to solve the problems at hand with available resources and not being afraid to ask for a little help along the way when needed."

Harris appreciates the commitment at BARC to employee development. While she gained solid mapping experience in college, it was not relevant to her current responsibilities. "My manager has been great in allowing me to participate in any training to help me better perform my duties and prepare me for future tasks that may accompany

my growth within the company," says Harris.

Relieved to have finally chosen the correct path on

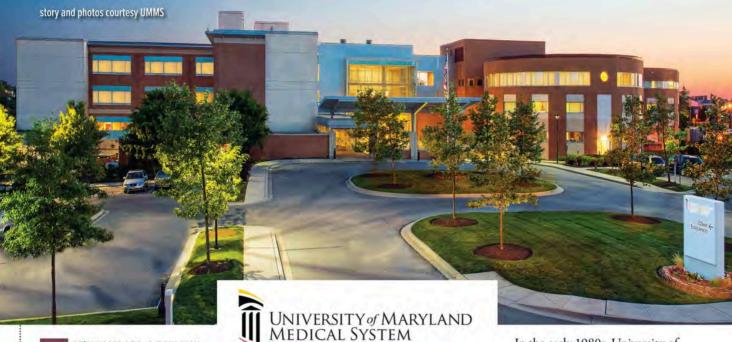

her career journey, Harris is grateful for the employee-centered benefits and focused goals provided by electric cooperatives like BARC. Both members and employees receive a mutually beneficial experience.

For more information, visit vmdaec.com/powerfulcareers.

## A Continuing Journey

University of Maryland Medical System celebrates 40 years

\$5 billion in annual revenues; more than 28,000 team members.

orty years ago, a new way to imagine healthcare in

Maryland was born when visionary leaders saw the future potential of a single state-owned and state-funded hospital in downtown Baltimore facing financial challenges. Fast forward to today and University of Maryland Medical System is a thriving network reaching urban, suburban and rural communities across the state, providing 25% of all hospital-based care in Maryland.

"The history of University of Maryland Medical System is a story that is focused on an incredible journey that demonstrates the power of leadership, the power of partnership and the success of privatization," says Mohan Suntha, M.D., MBA, president and chief executive officer of UMMS. "We are profoundly grateful for those who came before us and set the foundation upon which our future is built."

In 1823, faculty from University of Maryland College of Medicine formed the Baltimore Infirmary in downtown Baltimore which was the first teaching hospital associated with a degree-granting medical school and the original residency program in medical education. This later became University of Maryland Hospital, commonly known as "University Hospital," which operated as a state institution for more than 160 years.

In the early 1980s, University of Maryland Hospital was losing several

million dollars annually when a group of hospital leaders had the foresight to approach the state to privatize the hospital, and the University of Maryland Medical System Corporation — albeit a network of a single hospital — was created in state legislation in 1984 under then-Governor Harry Hughes as a private, nonprofit corporation.

Today, UMMS has nearly \$5 billion in annual revenues and more than 28,000 team members, and offers care in more than 150 locations, including 10 hospitals, five standalone emergency departments and a network of urgent care centers.

"When you think about who we are as a health system, we are everything from academic healthcare in urban-based environments like the city of Baltimore and Prince George's County, to a rural healthcare provider on the mid-Shore; to delivering healthcare in suburban counties like Anne Arundel, Baltimore, Charles and Harford," R. Alan Butler, chair of the UMMS board of directors, says. "We pride ourselves on innovation; today's medical discoveries and research lead tomorrow's clinical care at the bedside. While we are delivering the care of today, we take on the responsibility of educating the future healthcare workforce. We do this through partnership, and so when I look around today, I am incredibly excited about the partners that sit together."

## Small Bites, Big Benefits

Uncommon nutrition tweaks for better health

by Vanessa LaFaso Stolarski, Contributing Columnist

he hustle of daily life often launches us into poor health routines that catch up with us later. After all, it's easier to hit the drivethru than it is to meal prep or plan. But what if you could make a big difference with just a few small changes? Minor adjustments to your eating habits can lead to significant health improvements without complicated diet plans. More to the point, forcing ourselves into a diet that does not align with our lifestyle or schedule fails to be sustainable.

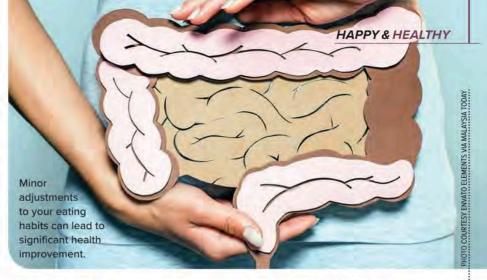

Here are some lesser-known nutrition changes that pack a powerful punch, especially when life gets away from us.

## SPICE UP YOUR LIFE

Adding more herbs to your meals isn't just about flavor — it's a health boost in disguise. Researchers have found that herbs and spices contain phytochemicals that can help reduce inflammation, protect against cancer and improve insulin resistance. Try sprinkling some oregano on your eggs, add cinnamon to your coffee, or add a dash of turmeric to your veggies.

Sauerkraut is a rich source of probiotics and vitamins.

## TIME IT RIGHT

It's not just what you eat but also when you eat that can promote positive health changes. Eating your main meal earlier in the day can lead to better weight maintenance and improved blood sugar levels. If you typically eat a big dinner, consider shifting your larger meal to lunchtime. This small change can help your body regulate its appetite signaling hormones and improve sleep cycles.

## BEFRIEND THE BEANS

Beans are an underestimated powerhouse of health benefits. Their fiber content alone can guarantee better heart health, improved gut function and lower cholesterol levels. Adding just a half-cup of beans to your daily diet can significantly boost your protein intake, too, which aids in muscle growth and repair. Try throwing some kidney beans into a salad or adding black beans to your taco night.

### MAGNESIUM MAKES MAGIC

To be clear, a person would have to eat like a pastured cow to get enough magnesium from food. It's typically the one supplement I instruct all my clients to take regardless of their diet. Magnesium is a mineral crucial to heart health, bone strength and energy production, and it regulates over 300 different biological systems. Eating magnesium-rich foods like pumpkin seeds, almonds or even dark chocolate (hooray!) can make a big difference in how you feel daily.

## **GUT-LOVING FERMENTS**

Sauerkraut, pickles, kimchi and yogurt are packed with beneficial bacteria that are great for gut health. Fermented foods can improve your digestion and boost your immune system. Additionally, studies show that poor gut health can also negatively impact mental health, so introducing these to your daily lineup has the potential to improve anxiety levels and stress management. Diversified bacteria and the fiber to feed it is key to healthy gut function.

## RETHINK YOUR DRINK

Swapping out just one sugary drink for a day for water or unsweetened tea can significantly reduce your risk of Type 2 diabetes and heart disease. It can also heal joint pain and promote weight maintenance. If plain water doesn't appeal to you, try infusing it with fruit or cucumber slices or choosing a flavored seltzer.

Remember, you don't have to make all these changes at once. Start with one or two manageable ones and build from there.

# Do You Live in Virginia or Maryland?

Here's what to plant this spring

by Scott Burell, Contributing Columnist

isten up gardeners, landscapers, arborists and outdoor enthusiasts — on March 20, it's time to "March" into spring. We will leave behind the dark days of dormancy and subfreezing temperatures and welcome warm breezes and a world transformed to green.

Some basics for those cultivating the land and seeking success with plants this spring are the following:

## AVAST, ME HARDIES ...

Know your plant hardiness zone based on the 2023 USDA Plant Hardiness Zone Map. The map is interactive and printable and available here: planthardiness.ars.usda.gov.

This newly revised map, which reflects your area's average extreme minimum temperature, has moved many of us up half a zone warmer than the previous 2012 map indicated.

I live close to Richmond, Va., which is now classified within Zone 7B, where the average minimum winter temperature ranges from 5 to 10 degrees. This zone is now the same as the coastal areas in Delaware and the Baltimore

Freckles is an annual romaine lettuce. Zonal hardiness will impact planting and harvest dates. Most of Maryland and Virginia are in Zones 6-7, which will work for this lettuce variety.

Highlands. The 2012 map categorized this area as Zone 7A.

The Hardiness Zone Map, along with the American Horticultural Society's Heat Zone Map (ahsgardening.org), is a crucial predictor of plant survivability, considering factors like soil types, humidity, water availability, and the microclimates unique to your area.

### SEEDS OF SPRING

Now that we've clarified that, let's discuss plants. I'm always excited for another wonderful introduction to Coral Bells (*Heuchera* genus). These perennials — plants that endure our cold winters and hot summers for over two years — showcase hundreds of cultivars with mounding leaves that vary (depending on the cultivar) from green to bright yellow, soft red, peach, and even almost black (like *Heuchera* Obsidian and Black Pearl).

One of my favorites is *Heuchera* americana (Dale's Strain), which is hardy in Zones 4-7. It's low-maintenance, native, and provides three seasons of interest with silver-overlaid leaves and delicate, wiry pink flower stalks. It is heat-tolerant, can function as a groundcover, adapts to various soils, and thrives in part shade to full sun. However, if you stress it too much with cold temperatures — think Zone 3 — or warm temperatures — think Zone 8-10 — you risk losing it. So, know your plant and be mindful of its preferred zones.

A short list of other fantastic low-maintenance, multi-season ornamental perennials and their cultivars to watch for in 2025 must include: the *Heucherellas* (crosses of Coral Bells and the native Foamflower/Tiarella);

the *Baptisias* (long-lived, with cultivars showcasing blue-purple, shocking yellow, and the soft cream flowers of *Baptisia* Vanilla Cream 2); the hardy *hibiscus*, H. moscheutos Edge of Night with bold purple foliage and saucer-sized pink flowers; the *Amsonia* (Bluestar) group; the perennial salvias like *Salvia greggii*; and the fall-to-late-winter blooming Helleborus, also known as Christmas or Lenten roses.

## A NEW SEASON

People often ask me when to plant, prune or water their plants. My initial response is, "Whenever you have time." Yes, you can plant in the spring but consider this: planting in the fall allows new perennials — herbaceous types (non-woody) and woody trees and shrubs — the whole winter to develop roots in preparation for the rigors of summer heat and water stress.

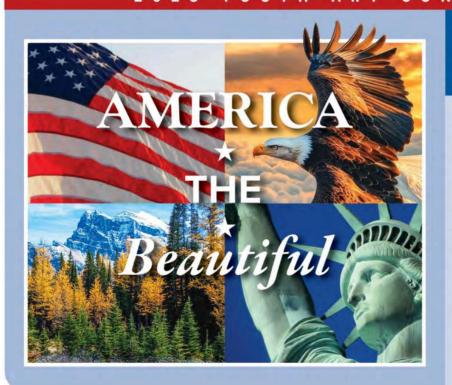

An exception is cool-season annuals like spinach, cilantro, kale, peas, kohlrabi, radishes and collard greens, which should be planted when temperatures are cool to moderately cold (generally above 38 degrees) in early March. The increasing day length leads to great overall production and allows them to mature before the hot days of June eliminate all but heat-hardy varieties such as Jericho romaine lettuce (*Lactuca sativa*), bred for Israel's desert heat and also showing good mildew and disease resistance in the mid-Atlantic.

It's a brave new world to "March" into, so get going! ●

Scott Burrell is a certified horticulturist who served as the horticulture director for the Virginia Historical Society for nearly 30 years.

## CONTEST YOUTH

23rd Annual Cooperative Living **Youth Art Contest** 

CONTACT: SONJA KINNEY | skinney@vmdaec.com | 804-297-3429

Through your artwork, show us what you think makes the United States of America beautiful.

The contest is open to all K-5 students. The deadline for submission is Friday, May 9.

The entry judged best in show from all categories will receive a \$100 Amazon gift card!

For rules and details. visit co-opliving.com/ contests/youth-art.

> Scan this code for more information.

# The Battle of the Bulge: **80 Years Later**

Honoring World War II's final major European battle

story courtesy of Family Features

he Ardennes Offensive, commonly known as the Battle of the Bulge, was the single bloodiest battle fought by the U.S. during World War II. Waged in the bitter cold of mid-December 1944, it took the Allies a month to secure victory. The cost was staggering: nearly 20,000 Americans were killed in action, close to 50,000 wounded and another 20,000 captured.

In honor of the 80th anniversary of this pivotal battle, the Library of Congress Veterans History Project has launched an online exhibit to commemorate the milestone. While the battle itself is etched in the annals of history, the personal stories from those who endured it remain one of the most powerful testaments to its impact.

PHOTOS COURTESY LIBRARY OF CONGRESS

Alvin Sussman, left, and Eliot Annable, veterans with the 106th Infantry Division, review a map of the Malmedy Massacre that occured in December 1944.

The online exhibit, "Serving Our Voices," features accounts from 12 Battle of the Bulge survivors. These stories are part of the thousands of narratives preserved by the project, which ensures that future generations can gain a deeper understanding of veterans' service and sacrifice.

One such story involves Eliot Annable, a 20-year-old

radio operator serving with the Army's 106th Infantry Division. Just days after arriving at the western front, Annable was under German artillery barrages on Dec. 16, 1944. In his oral history, he recalled the assault, describing the intensity as "almost enough to knock you on the floor."

The following five days became the most harrowing days of Annable's military service. While on a communications mission, he became stranded behind enemy lines and spent nearly a week evading the enemy in the Ardennes Forest without food, shelter or appropriate winter clothing. After traveling more than 30 miles, he safely rejoined his unit's remnants.

Back home, Annable's parents were gripped by uncertainty. On Dec. 31, 1944, his father wrote a letter expressing the family's anguish and love for their son, regardless of what happened. The moving letter and Annable's oral history provide an intimate view into one soldier's Battle of the Bulge experience.

Another featured veteran in the exhibit, Guy Martin Stephens, also served with the 106th Infantry Division. Unlike Annable, Stephens was captured by the Germans during battle. In his oral history, he recounted the surreal feeling of combat, the relentless hunger he endured as a prisoner of war, and the lingering effects of his time in captivity.

"It's hard," Stephens says. "It's something you can't ever ...
your mind is just like a video, or camcorder, I guess. You
put it in there. You get busy and get married. You get home,
and you get an education, and get a job, and raise your family
and everything like that. You can kind of gloss it over or
try to push it back, but it's always there, you know?"

Veterans who served during the 20th or 21st centuries are invited to establish a collection, including interviews (video or audio), letters and original photographs, even if they did not see combat. Families can also submit collections posthumously to honor their loved ones.

To explore more veterans' stories and learn how you can contribute to the program, visit loc.gov/vets.

## DISCOVER HOPEWELL Virginia

Discover Hopewell, Virginia, located just 20 minutes south of Richmond at the convergence of the James and Appomattox Rivers. Come take in a show at the historic Beacon Theatre. Explore the water on foot or kayak at the Hopewell Riverwalk. Browse the shops in historic downtown, then break for coffee or lunch at one of our cafés or restaurants. Visit historic Weston Manor and Appomattox Manor to walk in the footprints of the nation's founders. Enjoy drinks and dinner on the deck of the Boathouse at City Point overlooking the James River.

PLAN YOUR TRIP 804-541-2270 HOPEWELLVA.GOV

## INVESTING IN OUR STUDENTS. SECURING OUR CO-OP FUTURE.

The Virginia, Maryland & Delaware Association of Electric Cooperatives welcomes donations for its Education Scholarship Foundation. The Foundation board of directors, comprised of representatives from VMDAEC member co-ops, awards scholarships of \$1,500 and more to youth and future lineworkers in co-op service areas.

Your donation can be a gift, done anonymously, or in honor or memory of someone, and 100% of your donation will be used for scholarships.

vmdaec.com/scholarship

"Great things," however, didn't seem likely to come easy for young Cox.

Despite excelling at school, her home life was difficult. Her father suffered from an addiction to alcohol and was unable to keep a job for very long. His addiction defined their family dynamics and shaped much of Cox's childhood.

"I hated being at home," she remembers. "I would stay after school and do extracurricular activities when I could. I did

anything to get out of the house."

While challenging to share, Cox says, "I'm willing to tell my story because a lot of people don't understand how bad it can be to live with someone who is an alcoholic."

School became a haven for Cox, and she poured herself into her schoolwork. She knew getting an education was the key to overcoming her circumstances.

It was in her sophomore year that she identified her career path. "I took a bookkeeping class in high school, and I was fascinated by accounting. Numbers always made sense to me," she says.

Cox acknowledges that her parents' financial struggles impacted her being drawn to accounting. "I wanted to have a better understanding of how to best manage finances through accounting," she explains. "I didn't want my children to grow up the way I did. Not that money is everything, because it isn't — but it was difficult, and I didn't want that for them."

The following summer, just before her senior year in high school, Cox went to work for the sewing plant her mother worked at. She performed assembly line tasks, like putting plastic bags over pieces of clothing before they were put into shipment.

Just before returning to school, Cox was called into the office of the plant's manager. "I can even remember his name," she says. "Mr. Duvall said to me, 'I appreciate you being here and working

so hard. But ... don't come back next year asking me for a job.' When I heard him say that, I was devastated. I said, 'Why? What did I do?' He said, 'Nothing. But you can do better than this. You need to pursue your education.'"

It was a defining moment for Cox. She couldn't afford to attend college through the traditional route, so Cox went to work for Carolina Power & Light and took advantage of their employee tuition-reimbursement program. She attended college courses in the evenings while working full-time during the day.

In 1989, Cox married her coworker Robert. After only a short time together, Robert was offered a job at Baltimore Gas & Electric in Maryland. The couple moved to Huntingtown, Md., in 1990. Cox transferred her college credits to the University of Maryland and completed her bachelor's degree in accounting in 1994.

## FORGING AHEAD

Cox had her eyes set on a C-suite role. "I knew I wanted to be a CEO," she says. "Not this CEO position, specifically, but I had a dream of reaching the top. And I knew I needed to become a CPA to do that."

In 1998, she earned her Certified Public Accountant credentials. Everything was going according to her plan until, according to Cox, "a good monkey wrench" was thrown into the mix.

In 1991, Cox gave birth to her second child — a son — who was born with a congenital heart defect. He was diagnosed with DiGeorge Syndrome, a genetic condition caused by a missing piece of chromosome 22. "We decided that I would take some time off to care for our son Josh. After about a year, my husband's company agreed to pay for in-home nursing care five days a week, so I was able to go back to work," she explains.

In 1999, a position opened at Southern Maryland Electric Cooperative. Cox had heard that electric co-ops were great places to work and she was already familiar with the industry, so she applied for the job and was hired as financial reporting supervisor.

"When I came to work at SMECO, I got my [Master of Business Administration]," she says. She rose through the ranks until becoming senior vice president and chief financial officer in 2006. "When I became CFO, my mother was so proud of me. She told all of her friends and all of her sisters

(continued on page 12)

## The Journey to the Top

(continued from page 11)

and brothers," Cox says.

Her ascent to leadership over the next 14 years showcased her ability to lead and innovate, as well as her dedication, adaptability and willingness to learn. Cox credits Joe Slater, former SMECO president and CEO, for mentoring her. "He wanted me to succeed and always encouraged me," she says.

In 2016, Cox was named one of The Daily Record's Top 100 Women of Maryland. The Daily Record described her as a consummate professional and lauded her as having a "gift of handling myriad issues" with leadership and drive that "sets an example for all employees at SMECO." The feature also mentioned her duties as the point person on all fiscal/rate matters for the co-op, as well as the fact that she managed the human resources

after taking over as CEO, I had to figure out a way to send nearly 260 employees home to telework. We put a process in place and within 12 business days we were teleworking," Cox says.

When asked to name some other accomplishments during her time as CEO, Cox references SMECO's bid to privatize the electric system at the Indian Head Naval Surface Warfare Center. "SMECO will take over the electric system behind the fence, bring it up to safety code, install meters and handle other repairs. It's a 50-year contract," she explains.

Another big accomplishment during her tenure at SMECO was transitioning from a full-requirements wholesale power supply contract to

contracting with various power suppliers to fulfill the co-op's power supply needs. She explains, "We, with the assistance of ACES Power Marketing, manage our own power supply needs and we are not a member of a G&T. This was a very large undertaking."

Scott White, a member of SMECO's board of directors, says Cox is respected among SMECO employees and its industry peers. He says, "SMECO has made a lot of progress with regard to technological innovations, construction of power lines, substations and new facilities, and the expansion of customer services — and Sonja has been involved

with these improvements every step of the way."

### BREAKING DOWN BARRIERS

Electric cooperatives across the country are facing a similar challenge: filling leadership roles as older employees retire. According to a Jan. 31, 2023, article in RE magazine, "One silver lining to the dilemma is a trend among co-ops to further widen the net they cast for prospective senior staff, which has led to a small but noticeable uptick in the hiring of female CEOs and general managers." Between 2020 and 2021, the number of female co-op CEOs jumped from 80 to 90, according to the National Rural Electric Cooperative Association. As of January 2025, there were 98 female electric cooperative CEOs across the country, with Cox being one of only 10 on the East Coast.

As a female CEO in an industry with predominantly male CEOs, Cox acknowledges there are challenges. "When I'm talking to male colleagues - especially in engineering - they sometimes feel the need to explain things in layman's terms. I will usually say, 'I understand that. You can move forward. I don't need that explanation.' But, for the most part, the male co-op CEOs are generally very supportive especially in the Virginia, Maryland & Delaware Association. I am friends with a lot of the CEOs that belong to the Association, and they are amazing leaders and great people."

SMECO has been part of

"... make people feel like their jobs and their opinions are important and valued."

Sonja Cox, president and CEO,
 Southern Maryland Electric Cooperative

department of a 500-employee organization.

In March of 2020, Cox assumed the mantle of SMECO's fifth president and CEO. "My mother never got to see me become CEO, but I know she would have been proud of me," she says. Cox became the company's first female chief in its 83-year history.

Her first challenge after taking the position at SMECO's helm was dealing with a global pandemic caused by COVID-19. Crises present unexpected, complex scenarios that evolve quickly, and Cox handled them quickly and efficiently. "Two weeks VMDAEC, publisher of *Cooperative Living* magazine, since 2023. "We get tremendous value out of our membership in the Association. It's been a good investment for us," she says. Cox is the first female CEO in the VMDAEC network.

Says Brian Mosier, president and CEO of VMDAEC, "We are honored to have Sonja as our first female CEO represented on the VMDAEC Board and expect that trend to continue."

John Hewa, president and CEO of Rappahannock Electric Cooperative, notes that Cox is not only successfully guiding one of the nation's largest electric cooperatives, she is also a strong contributor when it comes to VMDAEC. "It's become quite common for the leadership teams [among the VMDAEC member co-ops to work alongside one another. Under Sonja's leadership, she has helped grow the strength of our statewide program. fortified our mutual-aid across the mid-Atlantic states, and extended SMECO's influence and helping-hand reputation across the national Association of Large Distribution Cooperatives."

Belvin "Butch" Williamson, president and CEO of A&N Electric Cooperative, has served with Cox on several regional cooperative committees and says, "I enjoy her passion for SMECO and the community it serves. Sonja brings a different perspective

National statistics reveal that women outside of the electric cooperative world hold only 29% of chief executive roles.

that provides a refreshing outlook to the utility industry."

## LEADING INTO TOMORROW

There are certain qualities that Cox believes are important in the role of CEO. Cox says, "I manage my employees as a team. I don't give out edicts; I ask for input. I think you also have to trust the people who work for you to do what you hired them to do, and make people feel like their jobs and their opinions are important and valued. You need to be willing to listen to people."

Jason Loehr, president and CEO of Southside Electric Cooperative, has known Cox for nearly 20 years. "Sonja's dedication to the employees and members of SMECO and the Southern Maryland community is unrivaled. Her commitment is evident not just in the success of her cooperative, but also in the respect that she has earned from her peers within the industry. As a lifelong Commanders fan, she knows the value of patience, perseverance and loyalty — qualities that she exhibits every day in the electric cooperative industry."

Cox's 2025 goals for SMECO include starting a three-year

communications project. "Our fiber communications system on the operations side is outdated and at end-of-life. We are replacing the communications system with a state-of-the-art system that will allow us to become more digital in the future," she says. Cox is also focused on setting up a methodical succession-planning process at

## BEYOND THE DESK

SMECO.

Cox lives in Leonardtown, Md., 20 miles from SMECO's headquarters. "I love the people here; they are very friendly. I also love being near the water, and that we are in an area with a lot of good food and music," she says.

She enjoys spending time with her husband and three grown children — Kristen, Josh and Gunnar — as well as her five-year-old granddaughter, Charlie, and two chihuahuas, Persi and Cassie. Cox also loves golfing, going on cruises and spending time at the beach.

Says Cox, "Growing up watching my parents struggle to provide for us was challenging, but it just made me more determined to achieve my goals and to provide a different kind of life for my family. I was able to do that for my children — but my greatest 'riches' will always be my family and friends. And being able to lead such a great team at SMECO."

## Another "First" Lady

Nancy Hoover, of Broadway, Va., was a trailblazer in the co-op world.

She was the first woman to serve on the board of directors for Shenandoah Valley Electric Cooperative, as well as the first woman to serve as chairman of the board of the Virginia, Maryland & Delaware Association of Electric Cooperatives, publisher of *Cooperative Living*. In 2003, she became the first woman to receive the coveted Leadership Award from VMDAEC.

"She was thorough, conscientious, passionate about the co-ops, and always kind to everyone in word and deed. She was a very special lady and will be missed," said retired VMDAEC CEO Richard Johnstone after Hoover passed away in October 2024.

## **Board of Directors: Call for Nominations**

Three (3) positions on the Rappahannock Electric Cooperative (REC) Board of Directors will be elected at the Cooperative's Annual Meeting on Aug. 20, 2025. To obtain the candidate nomination packet, visit myrec.coop/directorelections, email directorelections@myrec.coop or call 540-891-5889. Interested member-owners should complete the nomination packet by the deadline of 5 p.m. on May 2.

REC's Bylaws require that any member-owner who seeks election to the Board of Directors submit a nomination petition signed by at least 25 REC member-owners.

Nomination petitions will be distributed by Assistant Secretary to the Board, Whitney Watts, electronically or by scheduling an appointment to pick up the petition in person. To request the nomination petition, email directorelections@myrec.coop or call 540-891-5889.

No nominations can be accepted at the Annual Meeting in August.

The completed nomination materials and petition must be returned to the office of REC's president by 5 p.m. on May 2, 2025.

All member-owners will have the option to participate in the proxy designation process beginning July 1 or vote during the Annual Meeting on Aug. 20 to elect one director from each of the following three regions:

## **REGION I**

The counties of Frederick and Shenandoah, the portion of Page County located north of U.S. Route 211, and the portions of Warren County and Rappahannock County west of U.S. Route 522.

### **REGION VI**

Caroline County

Currently represented by Linda R. Gray.

## **REGION VII**

Louisa County

Currently represented by J. Mark Wood.

Currently represented by Michael W. Lindsay.

## To Become a Candidate

You must be an REC member-owner as defined under Article I of the REC Bylaws. You must also reside in the region that you wish to represent as provided under Article IV of the REC Bylaws. Member-owners signing the nomination petition can be from any of REC's nine regions. For further details on director qualifications and the nomination procedures, please review Article IV of REC's Bylaws.

The Bylaws are available in the Governance & Document Center of the My Cooperative section of myrec.coop.

## **Qualifications for directors:**

- Be a natural person;
- Be an actual, bona fide resident of the Region from which the Director or candidate seeks election:
- Maintain a primary residence in the Region from which the Director or candidate seeks election;
- Have been a member of the Cooperative for at least two (2) cumulative years; except this limitation shall not apply to members from any newly acquired or merged territory or as otherwise required by law;
- Have the capacity to enter into legally binding contracts;
- Be in "good standing" with the Cooperative;
- Not have been convicted of a felony or a crime of moral
- Not be a current or past employee or general counsel for the Cooperative, or spouse of a current or past employee or general counsel for the Cooperative;
- Not currently be an elected public official;

- Not in any way be employed by or be financially interested in a competing enterprise or a business selling electric energy or supplies to the Cooperative other than Old Dominion Electric Cooperative, or who has any conflict that may prevent said candidate from acting in the best interest of the Cooperative.
- Have executed and delivered to the Secretary a Confidentiality and Standard of Conduct Agreement, which shall be approved, adopted, amended or ratified from time to time by the Board of Directors in its sole and absolute discretion:
- Be able to or in compliance with the Cooperative's Governing Documents and policies of the Board of Director; and
- Have candidacy which will not otherwise give rise to an actual conflict of interest as determined by the Cooperative's legal counsel.

## YOURCOOPERATIVE, YOURVOICE

## The Proxy Designation Process opens July 1, 2025.

## **Member-Owner Proxy Designation Options**

**ONLINE** Member-owners will have two online options to access their proxy designation. In July, the online proxy portal will be available to all memberowners. Members will also have access to the portal when they log in to MyREC SmartHub.

BY MAIL | All member-owners will receive their official 2025 Proxy Designation Form by U.S. mail in July. This form can be completed and returned with the postage-paid envelope.

**DURING MEETING** | Participate in the live 2025 remote Annual Meeting on Aug. 20 and vote during the meeting.

MORE DETAILS | To obtain further information regarding the Director Elections, visit myrec.coop/directorelections, email directorelections@myrec.coop or call 1-800-552-3904.

## YOURVOICEMATTERS

## **How the Bitter Cold Impacted Your Electric Bill**

2025 started off with a bang, as much of Virginia saw snow pile up, and bitter-cold temperatures also blanketed the state for several weeks. And we all know March can include all four seasons in the same week.

Regardless, the bill that you are paying in March reflects electricity that you used during some of winter's coldest days in January.

## Here's why that matters:

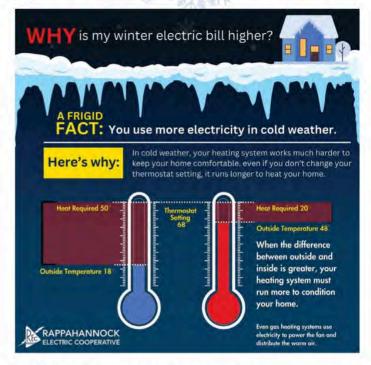

It all comes down to temperature differential. That refers to the difference between the temperature inside your home and outside. So, if the temperature dropped to 20 degrees overnight (as it did often in January!) and your thermostat was set to 70 degrees, that's a 50-degree difference.

The coldest hours of the day are typically overnight, so we don't realize how much more the heat is running. In the winter, the disparity between the outside and inside temperatures not only meant the heating system ran a lot more, but these low temperatures likely caused costly auxiliary backup heat to kick on.

If your home is drafty or if you use space heaters, your energy use will spike even further.

While your thermostat setting might have stayed consistent, the bitter cold temperatures caused your heating system to run more and use significantly more electricity.

Even if you take steps to reduce your energy use, you likely are still using significantly more electricity on days and months when the temperature differential is most pronounced.

For a great way to understand how your energy use impacts your electric bill, we encourage members to take advantage of tools available through MyREC SmartHub.

In MyREC SmartHub, click Build Your Home Profile and get personalized energy-efficiency tips and advice.

## **Committed to Transparent Governance**

REC, its Board of Directors and its Leadership Teams are committed to transparency and good governance. That's why, in 2019, your Cooperative created a section on the website to provide convenient access to REC policies, financial documents and other items related to its Board of Directors. REC believes that an informed membership contributes to the overall success of the Cooperative and that voluntarily sharing this information will benefit all member-owners. REC recognizes that an informed and engaged membership only makes for a stronger organization that is Focused on You.

myrec.coop/governance-document-center

REC's Summer Savings Plan is a free, voluntary solution that allows most residential members and some business members to receive a bill credit for using less electricity on specific days in the summer.

Looking ahead a few months, we want to help you save on the hottest days of the summer. **Extreme heat** during the summer often results in more electricity being used as people spend more time indoors.

This impacts the price REC pays for the electricity delivered to its member owners. **You can help and get a bill credit to do it!** Members who choose to participate will receive a bill credit based on how much energy they save during these times. For every kilowatt hour (kWh) saved, you will earn 75 cents in bill credits, which could add up quickly.

## **Even in the Bitter Cold, REC Crews Keep the Lights** on with Critical Upgrades and Inspections

Even in the bitter cold, REC crews work every day to inspect the electrical system and make critical upgrades to ensure members have the reliable power they depend on.

"Honestly, our guys are hardly phased by the weather," said Kevin Pories, Senior Director of Operations and Construction. "Whether it's 19 degrees or 90 degrees, they show up each morning focused on the project of the day. They've trained hard to do this work, and they know the work they do makes sure their friends and neighbors have power when they need it."

Crews and contractors **replaced more than 6,000 poles** last year, for instance, installing stronger, taller, sturdier structures that will reduce power outages. They also **installed more than 2,000 transformers** and **mounted more than 9,000 animal guards** to keep critters from disrupting electric service and **cleared more than 800 miles** of right-of-way.

March 2025 19

Meet the CARE Charity Board:

Patricia A.

Thomasson

Patricia A. Thomasson is a lifelong resident of Louisa County. She graduated from Louisa County High School in 1976 before heading to Mary Washington College, where she studied economics and political science.

Right out of college, she landed a job at the Federal Reserve Bank of Richmond. She worked there for just over 37 years, retiring in 2017. During her tenure, she worked in the Statistics Division of the Research Department, playing a vital management role to ensure data accuracy. She also worked in Community Affairs, focusing on the system's economic growth to promote community engagement.

As a member of the CARE Charity Board, which administers The Power of Change, Thomasson gets to make a true difference for those in need of assistance.

Thomasson first heard about the CARE Charity Board when Mark Wood, a member of REC's Board of Directors, told her there was an opening and that she would be a great fit. At the time, she was working as a non-medical caregiver for his father-in-law.

"Once I reviewed the Board's mission, I was all in," Thomasson said. The elderly and the youth are two groups that she cares dearly about.

From her own involvement in her community, she knows the elderly population struggle with income restraints, so supporting organizations that provide essential services to the elderly is important to her.

She is also passionate about supporting organizations that provide opportunities for children.

"Our youth need to be engaged so they can develop healthy social skills," she said. "Camps, sports and other opportunities are great, and so it's important that we do what we can so these organizations can provide financial assistance to low-income families."

She finds tremendous joy in giving back.

"I'm proud to be a voice for my community here in Louisa," she said. "I know firsthand what's going on and what's needed, so I can share that knowledge and insight."

In addition to serving on the CARE Board, she is actively involved in the community through her church and as a member of the Louisa County Human Services Advisory Board.

She also works part-time as a companion for elderly members of her community, helping them around the house and running errands. Since her retirement in 2017, she enjoys traveling. She had the opportunity to travel throughout her career, but it was centered on work. Now she gets to travel for fun.

Regardless of where she is, however, giving back is always on her mind — and she encourages all members to consider enrolling in The Power of Change.

To Thomasson, the key is how easy it is.

"All you have to do is opt to have your monthly electric bill rounded up to the next whole dollar," she explained. "It's less than \$1 a month, so it's a quick, simple way to give to your community."

"It's just rounding up your bill, but collectively it makes a huge impact."

## Make a Difference Today: Enroll in The Power of Change

Each month, more than 33,000 REC members round up their electric bill to the next whole dollar. The donated funds are then awarded to nonprofits and charities that support our communities.

Log in to myrec.smarthub.coop to enroll.

The stubborn bucket truck just wouldn't cooperate.

Only a day earlier, a Lewis Tree Service crew had easily maneuvered the vehicle into position along a rural road in the Watts Passage area of Albemarle County, where they trimmed trees along REC's power lines.

But less than 24 hours later, the guys just couldn't get the massive vehicle safely into the same position.

And, oh, did they try! Once, twice — even a third time — they attempted unsuccessfully to park the truck exactly where they had done so the previous day without issue. So, they decided to reposition the vehicle in a different spot.

Along with the crew's quick action, compassion and care, that might have saved a woman's life.

"I don't know if it was God," said Crew Leader Dagoberto Jacome. "But there was some kind of miracle in that moment."

After moving the vehicle, the crew quickly spotted an elderly woman lying in the brush several feet off the road. She couldn't speak, wore no shoes and was unable to walk.

She had no coat and was shivering in the winter cold.

Without hesitation, Jacome and his crew carried the woman to their work truck, gently buckled her into the back seat and blasted the heat to warm the woman until they could get additional assistance.

That extra help first came in the form of REC member Christy Grimes, who was driving her Honda HRV to the UPS store to mail some Christmas presents when the Lewis Tree crew waved her down.

Grimes called for help and knocked on the doors of neighbors, one of whom recognized the woman as a nearby resident. Grimes then worked with the Lewis Tree crew to safely return the woman to her home. (The elderly woman's grown children were contacted and quickly returned from their homes in New York to care for her.)

"I do think there's no coincidence that the woman was found by someone with that bucket truck," Grimes said. "They were in the right place at the right time. It just shows that good things do happen."

Of the Lewis Tree crew, she said: "They just seemed so caring and loving and really did the right thing. I do think that crew likely saved her life."

Their efforts did not surprise Cindy Musick, Senior Director of Vegetation Management Services at the Cooperative.

"What it says to me is they embody REC, and they are really an extension of who we are," Musick said. "They work on our system year-round in all kinds of weather, and I'm not surprised by any means. It just was a situation where they knew exactly what to do to rise to the occasion."

As for Crew Leader Jacome, he has little doubt what led them to that brush.

In recent years, he has returned home to Honduras each winter. This year, he opted to stay in Virginia, another fateful occurrence that made him available to lead the rescue efforts.

"There is not another answer," he said, pausing to reflect.

"That was God giving us the opportunity to save her life and be good human beings."

Casey Hollins, Managing Director —
Communications and Public Relations;
Tracy Woods, Departmental Assistant;
Jennifer Arnold, Billing Supervisor; Ana
Heflin, Billing Coordinator I and Member
Services Representative; Rachel Lugo,
Communications Specialist; and Amanda
Cooper, Departmental Assistant were among
the REC employees who recently volunteered
their time to support the Culpeper Chapter
of Project Linus, an organization dedicated
to providing handmade blankets to children
who are seriously ill, traumatized, or
otherwise in need.

"I'm proud to work for an organization that not only allows, but also encourages its employees to give back," said Tracy Woods, Departmental Assistant. "I'm an REC member myself, and it means so much to know we are helping our fellow members, especially the most vulnerable among us."

With Project Linus, REC volunteers helped prepare materials for an upcoming sewing day, assisting with cutting fabric, arranging patterns, and pinning quilt pieces together. Debbie Busby, Chapter Coordinator, shared her gratitude:

"Many hands make light work," Busby said.
"REC's volunteers were a huge help in getting materials prepped for our sewing day."

The Culpeper Chapter of Project Linus serves communities in Culpeper, Warrenton, Haymarket, Orange, Louisa, Fredericksburg and Spotsylvania. REC is proud to support their mission of bringing comfort to children in need.

"In 2024, dozens of REC employees participated in about 25 volunteer activities," said Community Engagement Specialist Terri Bevers. "This year will be no different. REC's culture of caring extends well beyond providing reliable power. Our employees live in the same communities we serve, and we know how important it is to give back."

**Learn more about Project Linus:** projectlinus.org

## **Climbing the Rungs to Outdoor Safety**

March is Ladder Safety Month, a good time to review precautions before you start on projects that require climbing.

- Look up and around for power line locations before using a ladder.
- Keep a minimum 10-foot distance from a power line or other electrical equipment at all times.
- Always be aware of power line locations before placing or climbing a ladder.
- Always be aware of the location of power lines when using long metal tools, such as ladders.

Classic Chic the toast of France

## Style and Sophistication for a Fraction of the Price!

## I Lost a Fortune at the French Races, but Fortunately I Found This Bag

Ready! Set! Go!"
The starting gate opened and 19 horses galloped off, each jockeying for the lead. While Apache, the horse I bet on, was the odds-on favorite, his rival Napoleon pulled ahead in the race's final seconds.

In less than a minute I lost a fortune at the Paris horse races.

After a brief moment of disbelief, something caught my eye. It seemed like every woman in Paris was carrying the same classic handbag! I had to have one for my own, so I had our handbag designers interpret this classic offer. Presenting the Parisian Chic Claire Handbag.

Inspired by the equestrian gear I encountered in the stables after the race, the Claire Bag is the color of saddle leather with metal adornments that recall horse bits and stirrups. Sturdy and chic, the Claire Bag is ideal for the woman on the go. See for yourself why the Parisian Chic Claire Handbag is the toast of France!

Backed by our satisfaction guarantee, you can revel in its sophistication risk-free for 30 days. Should it fail to dazzle, return it for a full refund of the item price.

## Handbag Specifications:

- · Brown vegan leather.
- 8 1/2" x 4" D x 6 1/2" H, 9 1/2" H w/handle.
- · Two interior open pockets, two interior zipped pockets, one outside zipped pocket.

## Drones over Opie

Mecklenburg County farm uses aerial technology to save time and money

by Michelle Greene Dean, The Delmarva Farmer

n rural Southside Virginia, it's rare to see a drone dropping cover crop seed on a field of soybeans, especially when they are already sprouted and ready for harvest. But that's precisely what Opie Farms is "up" to in Opie, Va., near South Hill.

"This process saves time and money," says Jarrett Callahan, a fifth-generation member of Opie Farms Inc. "Sometimes the cover crop is already coming up when we start harvesting the soybeans." Cover crops, sometimes called green manures, are seeds for plants grown to improve soil health, rather than for harvesting.

Jarrett's uncle, Eddie Callahan, purchased a DJI T40 model drone and a 17,500-watt Generac generator to help with the fuel and labor costs of planting cover crops.

"We have had the drone for about two years. We also apply fertilizer with

Cover crop seed used by Opie Farms to improve soil health.

the drone," says Jarrett's father, Jimmy. "It only takes about five minutes to outline a field on an app on your phone," Jarrett, also one of the farm's drone operators, says. "It then is downloaded to the drone controller. It isn't like a GPS in your car."

When asked the deciding factor in purchasing the drone, Jarrett says it's "timelier to spray and spread, also more cost-efficient application over existing crops. We switch out in rotation batteries to keep it going, a total of three batteries. The battery will last about 10-15 minutes or two hopper loads."

Brothers Eddie, Jimmy and Louis Callahan formed Opie Farms Inc. in 1990. Jarrett and Eddie's son Ryan, who joined the operation after college, are the fifth generation.

The elder Callahans have worked the land since they were very young. Farming is in their genes, they say. Both sides of their family were also farmers.

Their grandfather, Eddie Lee Callahan Sr., was the second-generation farmer to begin tilling the land that Opie Farms now works. Eddie Lee Sr. and his wife Mattie raised seven children and farmed the land about four and a half miles west of South Hill, Va. Eddie Sr. died at a young age, but Mattie and their seven children managed to keep the farm going.

cover crops.

From left, the Callahan family; Jarrett, Eddie. Jimmy, Ryan, Ryan's son Easton, and Louis. They operate Opie Farms Inc. in Opie, Va.

Eddie Lee Callahan Jr., known as Pete, worked hard to make a good life for his wife, Jean Green Callahan, and their four boys, on the land he worked after returning from his service in the U.S. Army. The boys have worked in the fields from a very young age and haven't stopped.

This is a legacy for this fifthgeneration farm. Their grandparents started with a mule and plow. Opie Farms uses emerging technology and is a multifaceted operation that grows tobacco, corn, wheat and rye, and operates a cow/calf business.

Over the years, they added more acreage and currently farm in both North Carolina and Virginia. For Jimmy, "taking on what Daddy did" and "hoping that the younger Callahan generation will continue," makes him smile.

# Moody March!

story and artwork by Anne M. Dellinger, Contributing Columnist

Ah, it's March ... the most temperamental month of the year in the Northern Hemisphere

an you guess why the third month has earned this title? If you said because of its wild, erratic weather patterns, you are a keen observer. You may even be familiar with some folklore involving a lion and a lamb that recognizes and predicts the shifting moods of March's weather madness.

The phrase "in like a lion, out like a lamb" means if March begins with a roar of wintry frigidcold weather, then the month should end with gentle weather, like a little

lamb ushering in spring.

This seems like a reasonable assumption because when March starts, it is still winter and by the end of the month, spring has officially begun.

However, some years the lamb comes in first and

triggers "early spring" things to happen.

If the first days of March arrive with a gentle, sunny disposition, then

flowers will start blooming, kids will hunt for their shorts and flip flops, and grown-ups will leaf through their seed catalog.

But March is a swing month, caught between winter and spring.

In this unsteady position, weather patterns can change March's mood drastically within a short period.

> Overnight the soothing, spring-like breezes can swiftly disappear into gloomy, frigid gusts.

If freezing rain or snow are part of the roaring wintry mix, then tender buds and blooms will

crystallize. Shivering kids will quickly grab their winter coats and beanies. Disappointed grown-ups will put the seed catalog back on the shelf.

Whenever the lion has the last word about March's weather, spring seems a

long way off. And that makes everyone a little glum.

In the meantime, no matter when the lion and lamb enter and exit March, there are four weeks to fill with actions for awakening and renewal.

As you look forward to the spring season, you can

celebrate the changeable nature of March with these activities.

This event begins on March 2, Dr. Seuss' birthday, and encourages children and youth in every community across the U.S. to observe the joy of reading.

Keep books everywhere you spend your time. Put them in your car, in your room and your backpack.

Visit the library and be sure to secure a card.

When March weather is uninviting, find a comfortable spot inside and get lost in an adventure.

Seeds can be started inside and kept on a sunny

soil moist and follow instructions on the seed packets for transplanting into larger pots when warmer days arrive. A potted garden is easy to maintain and is an ideal growing spot

when a patch of ground is not available.

Read

## Earth Day and Zinnia Seeds!

On April 22, honor the planet that owes its life to the sun by ordering some heirloom zinnia seeds for a garden plot or containers ... the pollinators will be most appreciative! To order heirloom zinnia seeds:

Send \$2 and a self-addressed (4x9 or 6x9) envelope with two stamps to: Anne M. Dellinger, 3328 Red Banks Road, Mt. Jackson, VA 22842.

## EXPLORE AND DISCOVER

When the weather becomes more "lamb-like," make plans with your family to venture out on some hiking trails in a wooded area or state park.

If possible, go prepared with a backpack that holds a hand lens, pencil, small notebook and a camera. Be sure to get down on the forest floor where you can get a close-up view of new life poking up through the leaf litter. Mother Nature always has awesome surprises waiting to be uncovered. All you have to do is look! As you go about making discoveries, take time to record your findings so you can relive your little adventure when back home.

Hopefully you will want to keep on exploring during this transitional period of the year, especially when the days get longer and warmer.

And, if a fickle March mood swing happens to ruin your plans, remember these words by writer Hal Borland, "No winter lasts forever; no spring skips its turn."

The lion and lamb of March folklore may relate more to astronomy than to March's unpredictable weather. It is believed, by some, that a certain constellation that rises in the East in early March and another constellation that sets in the West at March's end are recognized as the basis for the familiar saying — "in like a lion, out like a lamb."

Help Hay Seed and City Slicker learn more about these March constellations and take a chance for a \$25 Amazon gift card by following the directions below.

- Find and name the two constellations hidden in this magazine, giving the page number.
- Observe March's weather throughout the month. Begin
  by recording the temperatures and weather conditions
  on a calendar during the first week or so. Then do the
  same observations at the end of the month. How would
  you interpret your findings using the lion and lamb
  analogy to describe the weather of March 2025?

For a chance to win a **\$25 Amazon email gift card**, enter online at co-opliving.com/super-sleuth or send answers with name, address and phone number to:

Cooperative Living Super Sleuths 4201 Dominion Blvd., Suite 101 Glen Allen, VA 23060

Kids Korner submissions are for children under the age of 16.

## NOVEMBER - DECEMBER Super Sleuths

The November-December Super Sleuths was about the holiday season. For a chance to win a \$25 Amazon email gift card, kids were asked to find a string of holiday lights hidden in the pages of the magazine and give the page number, share what kind of lights are used in their family's holiday celebration, and name their favorite type of holidays lights.

The winning answers are:

- Page 2
- "We use multi-colored LED lights outdoors, multi-colored lights on the tree, and white twinkle lights in the Christmas village."
- · "Rainbow-colored lights."

OUR WINNER IS CHIARA.

Congratulations, Chiara!

## Savory Breakfast Muffins

recipe and photo courtesy of Lindsay Harold

### Ingredients:

36 frozen tater tots, thawed
½ lb. breakfast sausage, browned
9 large eggs
½ cup milk
salt and pepper
about 1 cup shredded sharp
cheddar cheese

### Directions:

Preheat oven to 350 degrees. Grease a standard muffin pan and place 3 tater tots in each well. Divide sausage bits evenly between the muffin wells. Beat the eggs and milk until smooth. Mix in salt and pepper to taste. Pour the egg mixture over the tater tots and sausage, dividing evenly. Muffin wells will be nearly full. Place a pinch or two of shredded cheese on top of each one. Bake for 20-25 minutes or until set. Serve warm. Yields 12 servings.

## Sunshine Smoothie

recipe courtesy of Family Features/Culinary.net

## Ingredients:

2 cups orange juice

2 cups grapefruit juice

2 bananas, peeled and cut into chunks

1 cup vanilla yogurt

1 teaspoon vanilla extract

### Directions:

In blender, blend orange juice, grapefruit juice, banana chunks, yogurt and vanilla extract until smooth. Serve immediately. Serves 2-4.

Note: If smoothie is too tart, reduce to 1 cup grapefruit juice.

## Mixed Berry Whole-Wheat Muffins

recipe courtesy of Family Features/Healthy Family Project

## Ingredients:

11/4 cups white whole-wheat flour

1 teaspoon baking powder

1 teaspoon baking soda

1/8 teaspoon salt

1 large egg

1/2 cup maple syrup

2 teaspoons vanilla extract

¾ cup plain nonfat Greek yogurt

 $^{3}\!\!/_{\!4}$  cup unsweetened applesauce

1/2 cup chopped strawberries

1/2 cup blueberries

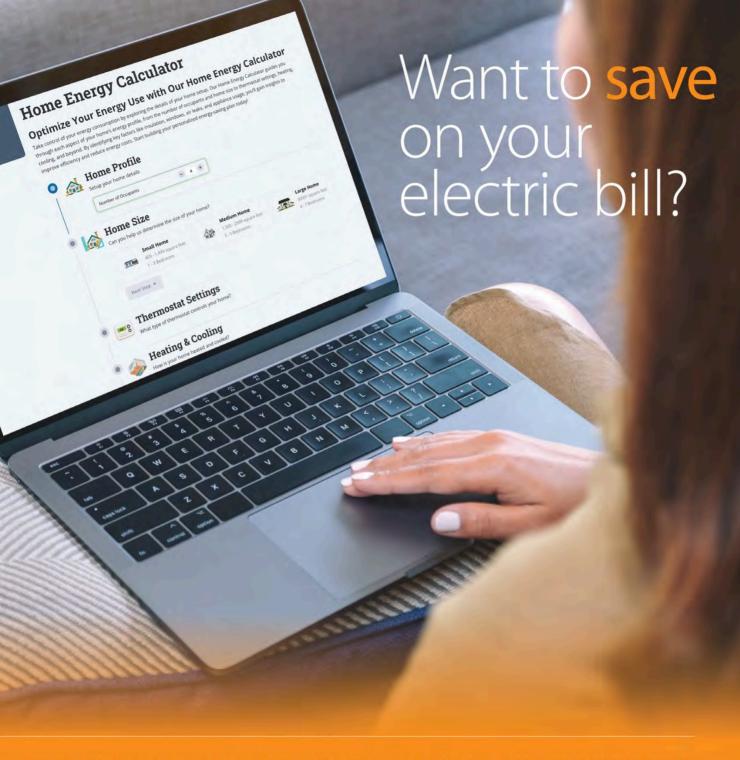

### Directions:

Preheat oven to 400 degrees. Grease muffin pan and set aside. In medium bowl, whisk flour, baking powder, baking soda and salt. In a separate large bowl, mix egg, maple syrup, vanilla, yogurt and applesauce. Add dry ingredients to wet ingredients and stir until just combined. Do not overmix. Fold in strawberries and blueberries. Pour batter into prepared muffin tin, filling cups about 3/4 full. Bake 15 minutes, or until tops are golden brown and toothpick inserted in center comes out clean. Remove from oven and let cool in muffin tin 5 minutes before removing. Serves 12.

ODEC's **Home Energy Calculator** is here to help. Simply answer a few questions about your home and your energy consumption, get personalized tips and learn how you could **save hundreds** — **or even thousands** — **annually**.

Regular grooming can keep your dog looking and smelling his or her best, but it's also important for maintaining health. If you choose to groom at home rather than opting for (often expensive) professional care, it's also an opportunity to examine your pet for potential concerns.

A proper grooming routine starts with the right tools. Consider these suggestions from The Humane Society of the U.S.:

- Dog-friendly nail clippers
- · Rubber-bristled brush
- · Dog-friendly toothbrush and toothpaste
- Dog-friendly shampoo and conditioner
- Cotton balls
- Blunt-ended shears or small clippers with guides
- Microfiber towel

## TRIMMING NAILS

When your dog's nails nearly touch the ground, it's time for a trim, typically every 3-4 weeks. Trimming the part of the nail that turns down helps prevent pain and damage to paws.

If your dog has white nails, avoid cutting the "quick," the pink part that's visible on white nails, which bleeds when cut. For dark nails, simply trim a bit at a time until evidence of the quick is visible.

## **BATHING AND BRUSHING**

Frequency for baths and brushing depends on your dog's coat type — be sure to research optimal grooming schedules based on his or her breed. In general, The Humane Society

of the U.S. recommends these guidelines:

- Short, smooth or wiry coat: Brush once a week with a rubber-bristled brush.
- Long, silky or curly coat: Brush once a day with a rubber-bristled brush or wire slicker brush. Use a steel comb to prevent tangles or mats, if necessary.
- Double coat: Use an undercoat rake or de-shedding tool to gently de-shed once a week in addition to regular brushing routines.

When it's bath time, use a shampoo formulated for dogs and a damp cloth or cotton ball to clean around the eyes and ears without pushing anything into the eyes or ears. Dry with a microfiber towel or hair dryer on a low setting.

### **CUTTING FUR**

Be careful and work slowly to avoid mistakes and keep your dog calm and comfortable. Brush, bathe and completely dry prior to cutting fur with blunt-ended shears or small clippers with guide combs. Specifically trim hair covering the eyes and private areas and between your pup's paw pads. It may be helpful to watch a tutorial online to ensure success.

### **BRUSHING TEETH**

You can prevent gum disease and plaque buildup by brushing your dog's teeth with a soft toothbrush and dog-friendly toothpaste. Make sure your pet is comfortable and start slow, staying on the outside surfaces of teeth and gently rubbing back and forth. Focus on the area where the tooth surface meets the gum. •

To some, sunglasses are a fashion accessory...

## **But When Driving,** These Sunglasses **May Save Your Life!**

Drivers' Alert: Driving can expose you to more dangerous glare than any sunny day at the beach can... do you know how to protect yourself?

The sun rises and sets at peak travel periods, during the early morning and afternoon rush hours and many drivers find themselves temporarily blinded while driving directly into the glare of the sun. Deadly accidents are regularly caused by such blinding glare with danger arising from reflected light off another vehicle, the pavement, or even from waxed and oily windshields that can make matters worse. Early morning dew can exacerbate this situation. Yet, motorists struggle on despite being blinded by the sun's glare that can cause countless accidents every year.

Not all sunglasses are created equal. Protecting your eyes is serious business. With all the fancy fashion frames out there it can be easy to overlook what really matters-the lenses. So we did our research and looked to the very best in optic innovation and technology.

Sometimes it does take a rocket scientist. A NASA rocket scientist. Some ordinary sunglasses can obscure your vision by exposing your eyes to harmful UV rays, blue light, and reflective glare. They can also darken useful vision-enhancing light. But now, independent research conducted by scientists from NASA's Jet Propulsion Laboratory has brought forth ground-breaking technology to help protect human eyesight from the harmful effects of solar radiation light. This superior

Slip on a pair of Eagle Eyes" and everything instantly appears more vivid and sharp. You'll immediately notice that your eyes are more comfortable and relaxed and you'll feel no need to squint. The scientifically designed sunglasses are not just fashion accessories-they are necessary to protect your eyes from those harmful rays produced by the sun during peak driving times.

lens technology was first discovered when NASA scientists looked to nature for a means to superior eye protection—specifically, by studying the eyes of eagles, known for their extreme visual acuity. This discovery resulted in what is now known as Eagle Eyes®.

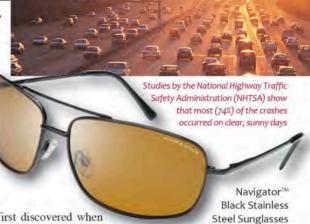

The Only Sunglass Technology Certified by the Space Foundation for UV and Blue-Light Eye Protection. Eagle Eyes® features the most advanced eye protection technology ever created. The TriLenium® Lens Technology offers triple-filter polarization to block 99.9% UVA and UVB-plus the added benefit of blue-light eye protection. Eagle Eves® is the only optic technology that has earned official recognition from the Space Certification Program for this remarkable technology. Now, that's proven

The finest optics: And buy one, get one FREE! Eagle Eyes® has the highest customer satisfaction of any item in our 20 year history. We are so excited for you to try the Eagle Eyes® breakthrough technology that we will give you a second pair of Eagle Eyes Navigator Sunglasses FREE--a \$59.95 value!

science-based protection.

That's two pairs to protect your eyes with the best technology available for less than the price of one pair of traditional sunglasses. You get a pair of Navigators with stainless steel black frames and the other with stainless steel gold, plus one hard zipper case and one micro-fiber drawstring cleaning pouch are included. Keep one pair in your pocket and one in your car.

Your satisfaction is 100% guaranteed. If you are not astounded with the Eagle Eyes® technology, enjoying clearer, sharper and more glare-free vision, simply return one pair within 30 days for a full refund of the purchase price. The other pair is yours to keep. No one else has such confidence in their optic technology. Don't leave your eyes in the hands of fashion designers, entrust them to the best scientific minds on earth. Wear your Eagle Eyes® Navigators with absolute confidence, knowing your eyes are protected with technology that was born in space for the human race.

Icy walkways, titanium knees and cawing for help

Adventures in a wintry wonderland

by Margo Oxendine, Contributing Columnist

am so very glad March is here. It means I can go for my walk on the lane again.

It's been too cold and icy to venture

for much other than to scurry to the car and then make a 32-point turn to head down the driveway.

I decided sometime in January that I could "at least" walk down the driveway to get my mail. I recently lost quite a bit of weight, but here's what I learned: it is much easier putting pounds back on again than losing them in the first place.

Heavy snow arrived in early January. It was beautiful, and I reveled in it. That is, until I ventured out to shovel my steps and create a path to the car. It was possibly the heaviest snow I've ever experienced. I carved a narrow path down to the car and left the rest piled high on the sides.

As I shoveled, my brain screamed: "You fool! You just had two heart surgeries! What are you thinking?"

The piles of snow never began to melt. They just became iced over, so much so that I could walk atop them and barely break through, even with my new extra pounds.

So, one bright sunny 15-degree day, I decided to walk down and get the mail. It was a big mistake.

You know how I often talk about the importance of carrying your cellphone when you go for a walk? Well, that day, for some reason, I forgot it. Sure enough, halfway through, I slipped on ice and fell flat on my backside. That backside was soon frozen in no time.

I knew it would hurt like the dickens, but I got to my knees. Or what passes for "knees" now that they're titanium. I have no more kneecaps. It's pretty difficult to maneuver.

But there was no "purchase" on the ice. Not a single bare spot to put my foot down and get some leverage. I was stuck, flat out, in my driveway. I reached for my phone. My pocket was empty. What a fool!

I hoped someone driving down the busy highway would glance up and see a colorful heap — that would be me — crumpled in the driveway and come to help. But no. So, I started hollering, "Help! Help me, please!" This is the second time I've had to do that in

several months. And just as many helpers seemed to hear me: none.

My neighbor, who often helps me out of tough spots, was down in his house. I could see his truck. But I also know he's a little hard of hearing. Would he hear my plea? Probably not.

Turns out, he did hear something. Something he later told me he thought was a crow cawing.

As I lay there in the icy freeze, I could see his truck. And ... yes! He came outside and walked to it. I yelled even louder. He got in the truck! He then drove away, out to the highway. Ack!

But then, salvation. His truck turned up my driveway!

Here's the thing: He couldn't get me up. There truly was nothing to get a grip on in order to stand up.

Luckily, he had a cellphone in his car. I used it to call 911 and ask for a deputy to come haul me up. One arrived in short order. And then two more soon after. It was apparently a slow crime day. Between the three of them, they managed the hauling task of getting me to my feet. They then escorted me to my porch.

While I babbled my thanks to them, one said, "Some women will do anything to get three strong, handsome men to her house!" Well, he's got that right.

To order a copy of Margo's "A Party of One," call 540-468-2147 Mon.-Wed., 9 a.m.-5 p.m., or email therecorderoffice@gmail.com.

WHEREZ IT?

Look for the CL logo, like the one above, in the pages of this issue of *Cooperative Living*. Submit the page number where you found it, along with your name, email and phone number to **Wherezlt**, *clo Cooperative Living*, 4201 Dominion Blvd., Suite 101, Glen Allen, VA 23060 or go online at co-opliving.com under "Contests." Deadline is **March 20**. The winner will receive a \$25 Amazon email gift card.

## Head Inland, Young Foodie

Piedmont seafood restaurant does not disappoint

by Peggy Hyland, Contributing Columnist

hanks to a reader's suggestion, my companion and I spent a sunny Saturday heading to Bedford, Va., to visit Clam Diggers Seafood. What caught my attention was discovering that they originally started along the Chesapeake Bay and kept the same suppliers after relocating to the Piedmont. It felt strange to travel away from the water for the freshest seafood, but I had to see for myself.

Immediately, I was excited to see the many options on the menu and wanted to try a bit of everything. Luckily, you can order a wide variety of items a la carte, so I didn't have to make a definite choice. Of course, we had to start with the bacon-wrapped scallops. The smoky bacon complemented the tender scallops perfectly, enhanced by a zesty sauce that held them together. The spicy crab dip was creamy and rich, offering just the right amount of lingering heat.

If you've only ever had fried clams, Clam Diggers is the perfect spot to try fresh ones. The clams were incredibly fresh and lightly steamed, tasting delightful with a generous sprinkle of Old Bay. Growing up in Maryland, I have strong opinions about crab cakes, so I was thrilled to find one that reminded me of home. It was silky,

Got a restaurant for Peggy to review? Let us know at editor@co-opliving.com.

light on filler, and tasted as if the crabs had recently been caught.

After enjoying our appetizers, we turned our attention to the main courses. The scallops were perfect, featuring a luxurious texture that highlighted their freshness. My companion chose roasted potatoes as his side dish. They were tender on the inside, slightly crunchy on the outside, and beautifully seasoned. I ordered the shrimp burger, opting for the Asian barbecue sauce based on our server's suggestion. It was a true delight: generous pieces of shrimp, fantastic texture, and caramelized on the outside from the glaze of the sauce. It was spectacular, and I couldn't stop raving about it all the way home.

The food arrived quickly, but we never felt rushed. We had ample time to enjoy the appetizers and then relax with our main courses. By the time we reached dessert, we were stuffed, so we took our brownies to go and savored them at home. They struck that delicate balance of texture, combining fudgy richness with a cakey lightness.

I never would have imagined driving several hours inland to enjoy some of the best seafood Virginia has to offer, but Clam Diggers truly did not disappoint.

Clam Diggers Seafood 109 S. Bridge St., Bedford, Va. Thursday-Saturday, 11:30 a.m.-9:30 p.m. 540-587-6727

ONLIDORISMON Bles for Cognerative

ODEC

ODEC may sell renewable energy certificates related to these purchases to its member distribution cooperatives and non-members.

The following Virginia electric cooperatives — A&N, BARC, Community, Mecklenburg, Northern Neck, Prince George, Rappahannock, Shenandoah Valley, and Southside — purchased electricity from Old Dominion Electric Cooperative (ODEC) in 2024. In addition, all of these cooperatives, except A&N, purchased a small amount of hydroelectric power from the Southeastern Power Administration (SEPA). ODEC also provided power to Choptank Electric Cooperative in Maryland and Delaware Electric Cooperative.

Online:

In 2024, ODEC generated or purchased approximately 14.3 million megawatt-hours of electricity for resale to its member distribution cooperatives and to non-members. Emissions from all of ODEC's owned (and shares of partially-owned) generating facilities averaged approximately 0.000150 tons per megawatt-hour for nitrogen oxide, and approximately 0.000030 tons per megawatt-hour for sulfur dioxide. SEPA supplied approximately 200,088 megawatt-hours of electricity to the eight Virginia cooperatives indicated above. The chart displays the percentages of total energy supplied by ODEC and SEPA to all ODEC members in 2024. The power supply mix of individual ODEC members may vary as a result of purchases or generation of power directly from other resources.

For questions related to this summary data, please call Laura Rose at 804-968-7160.
